DIVISION 16 - ELECTRICAL

Section 16435 – Switchboards

Introduction

There are unique University requirements.

Part 1 - General

• Refer to Appendix Section 16435 and incorporate into project.
  • Provide a comprehensive specification.
  • Include the following in performing the design and specifications.
    • Pull sections shall be required.
    • Top of main device shall be line side.
    • Sections shall have steel barriers or galactic barriers between each section.
    • Metering shall be cold sequence.
    • Metering shall be Veris as specified in Metering Section 16430.
    • Suppressor shall be hard bussed and mounted in its own cubicle.
    • Areas next to last section shall be planned and marked on the floor for future extension. Provide the housekeeping pad now.
    • Integrated switchboard design is discouraged unless required by the UA Electrical Engineer.
    • Bussing and system design will address coordination of devices. Designer shall provide 4 to 1 separation on motor feeder devices and transformer feeder devices, when referenced to the upstream device.
    • Transformer feeder breakers shall be electronic, and coordinated to the transformer and its inrush.
    • Consultant shall base initial coordination on Cutler Hammer, Siemens or Square D.
    • Provide electronic type breakers on devices below 200 amperes whenever clean coordination cannot be achieved, including elevator feeder breakers.
    • NEMA 1 Construction with sprinkler shield.

Part 2 - Products

• Refer to Appendix Section 16435 and incorporate into project.
• Approved manufacturers, subject to submittal review are Cutler Hammer, Siemens and Square D.

Part 3 - Execution

• Refer to Appendix Section 16435 and incorporate into project.
• Edit carefully, as required for the project.
